

TECLINE

PEANUT ASYMMETRIC

DESIGNED FOR PERFECT SINGLE-TANK CONFIGURATIONS!
SAFETY, COMFORT AND PLEASURE OF DIVING...

in **3** STEPS

1. GOOD POSITION + EASY BUOYANCY CONTROL

Thanks to the expertise of our consultants (experienced technical and recreational diving instructors) we realized that the **HIGH-HEAD POSITION** is a key factor that helps to achieve the "TOP":

GOOD **T** RIM - HORIZONTAL POSITION

O PEN AIRWAYS

P ERFECT BUOYANCY CONTROL

HIGH HEAD BENEFITS:

GOOD **T** RIM POSITION

BETTER
ORIENTATION

+

P ERFECT
BUOYANCY

O PEN AIRWAYS ➤ EFFICIENT BREATHING

● TOP PART

of TecLine Peanut Asymmetric is reduced to the minimum :

**FREE SPACE ▶
BEHIND THE HEAD**

▶ STREAMLINED HOSES ▶

2. GAS DUMPING SYSTEM

THE TRIANGULAR EXTENSION in the upper part of the Peanut assures that the **GAS FLOWS DIRECTLY** to the corrugated hose of the inflator. It makes it easier to deflate the BC in any position.

The **LOWER DUMP VALVE** is located on the edge of the bladder. It makes it **EASIER TO FIND AND USE IT** in the proper position :

3. SAFETY ON THE SURFACE

The principal role of any BCD is to keep a diver in a **HIGH AND STABLE POSITION** on the surface. The problem may occur in standard wings as they don't have enough lift capacity.

BIG LIFT CAPACITY and **SMALL SIZE** come from the: **“3D CONSTRUCTION”**. Peanuts are wider in the central and lower parts to effectively use the space **BETWEEN THE TANK AND BACKPLATE**.

SMALL SIZE BCD + BIG CAPACITY UP TO 21 LITERS.

TECHNICAL DATA:

Internal bladder made of PU-240

External layer made of **CORDURA NYLON 1000D** or **KEVLAR** (depending on the version).

The external layer zips with **YKK** zipper.

Weight: **950g**.
